

INTRINSIC 3d - ELASTICITY

dedicated to John BALL on the occasion of his 60th Birthday

1. THE METRIC, OR CAUCHY-GREEN, TENSOR

$$\mathbb{M}^3 = \{3 \times 3 \text{ real matrices}\} \quad \mathbb{S}_>^3 = \{\mathbf{A} \in \mathbb{M}^3; \mathbf{A} = \mathbf{A}^T \text{ pos-def}\}$$

$$\mathbb{O}^3 = \{\mathbf{Q} \in \mathbb{M}^3; \mathbf{Q}\mathbf{Q}^T = \mathbf{I}\} \quad \mathbb{O}_+^3 = \{\mathbf{Q} \in \mathbb{O}^3; \det \mathbf{Q} = 1\}$$

• GEOMETRY Ω : open subset $\subset \mathbb{R}^3$

$\Theta: \Omega \rightarrow \mathbb{R}^3$ smooth enough immersion: "deformation"

$\mathbf{C} = \nabla \Theta^T \nabla \Theta = (g_{ij}): \Omega \rightarrow \mathbb{S}_>^3$
 "metric tensor"

"Cauchy-Green tensor" $g_{ij} = \partial_i \Theta \cdot \partial_j \Theta$

$\gamma = f(I) \subset \Omega, I \subset \mathbb{R}, \mathbf{f}(t) = f^i(t) \mathbf{e}_i, t \in I$

Length $\Theta(\gamma) = \int_I \sqrt{g_{ij}(\mathbf{f}(t)) \frac{df^i}{dt}(t) \frac{df^j}{dt}(t)} dt$

2. CLASSICAL AND "INTRINSIC" APPROACHES IN 3D-NONLINEAR ELASTICITY

2

↑ CLASSICAL ↓

$$I(\Theta) = \int_{\Omega} W(x, \nabla \Theta(x)^T \nabla \Theta(x)) dx - \int_{\Omega} \mathbf{f}(x) \cdot \Theta(x) dx$$

energy dependence on $\nabla \Theta$ via $\mathbf{C} = \nabla \Theta^T \nabla \Theta$ (frame-indifference) applied force

$$\inf I(\Theta) \text{ on } \left\{ \begin{array}{l} \Theta \text{ injective in } \Omega \text{ (non-interpenetrability)} \\ \det \nabla \Theta > 0 \text{ in } \Omega \text{ (orientation-preserving)} \\ \Theta = \Theta_0 \text{ on } \Gamma_0 \subset \partial \Omega \text{ (boundary condition)} \end{array} \right.$$

Existence via "polyconvexity" J. Ball, ARMA (1977)

↑

Question: Why not $\mathbf{C}: \Omega \rightarrow \mathbb{S}^3$ as the primary unknown instead of $\Theta: \Omega \rightarrow \mathbb{R}^3$? S.S. Antman, ARMA (1976)

↑ INTRINSIC ↓

But then: Quid $\int_{\Omega} \mathbf{f}(x) \cdot \Theta(x) dx$? Quid $\Theta = \Theta_0$ on Γ_0 ? Minimization problem with constraints on \mathbf{C} ($R_{ijk}^P = 0$)

Pbm #1: Given $\mathbf{C}: \Omega \rightarrow \mathbb{S}_>^3$: recovery of $\Theta: \Omega \rightarrow \mathbb{R}^3$ such that $\nabla \Theta^T \nabla \Theta = \mathbf{C}$ in Ω ?

Pbm #2: Continuity of $\mathbf{C} \rightarrow \Theta$ \therefore which topologies? Minimizing seq'ce: $\mathbf{C}^k \rightarrow \mathbf{C} \Rightarrow \Theta^k \rightarrow \Theta$?

Appl'ns: Differential geometry, 3d-nonlinear elasticity

Same questions for surfaces in \mathbb{R}^3 as functions of their two fundamental forms

Appl'ns: Differential geometry, nonlinear shell theory

Note: Rotation field \mathbf{R} in $\nabla \Theta = \mathbf{R} \mathbf{C}^{1/2}$ may be also chosen as a primary unknown (see p. 11 bis)

P.G.C. - L. Gratie - O. Josifescu - C. Mardare - C. Vallée, JMPA (2006)

3. RECOVERY OF $\Theta: \Omega \rightarrow \mathbb{R}^n$ FROM $C: \Omega \rightarrow S^n$

3

EXISTENCE THEOREMS: Let $C = (g_{ij})$ symmetric & positive-definite in Ω

$$\Gamma_{ij}^k \stackrel{\text{def}}{=} \frac{1}{2} g^{kl} (\partial_i g_{jl} + \partial_j g_{li} - \partial_l g_{ij}) = \Gamma_{ji}^k, \quad (g^{kl}) \stackrel{\text{def}}{=} (g_{ij})^{-1}$$

$$R^p_{.ijk} \stackrel{\text{def}}{=} \partial_j \Gamma_{ik}^p - \partial_k \Gamma_{ij}^p + \Gamma_{ik}^l \Gamma_{jl}^p - \Gamma_{ij}^l \Gamma_{kl}^p = 0 \text{ in } \Omega \quad \text{nee. cond'n if } C = \nabla \Theta \nabla \Theta$$

Thm

$\Omega \subset \mathbb{R}^n$; simply-connected, open

Existence of $\Theta: \Omega \rightarrow \mathbb{R}^n$ s.t. $\nabla \Theta^T \nabla \Theta = C$ in Ω :

(1) $C \in C^2(\Omega) \rightarrow \Theta \in C^3(\Omega)$ if $R^p_{.ijk} = 0$ in Ω (classical)

(2) $C \in C^1(\Omega) \rightarrow \Theta \in C^2(\Omega)$ if $R^p_{.ijk} = 0$ in $\mathcal{D}'(\Omega)$

C. Mardare, Anal. Appl. (2003)

(3) $C \in W_{loc}^{1,\infty}(\Omega) \rightarrow \Theta \in W_{loc}^{2,\infty}(\Omega)$ if $R^p_{.ijk} = 0$ in $\mathcal{D}'(\Omega)$ & $(g_{ij})^{-1} \in L^\infty(\Omega)$ S. Mardare, Anal. Appl. (2004)

(4) $C \in C^2(\bar{\Omega}) \rightarrow \Theta \in C^3(\bar{\Omega})$ if $R^p_{.ijk} = 0$ in Ω & C positive-definite in $\bar{\Omega}$ & $\partial\Omega$ Lipschitz-cont's
P.G. Ciarlet - C. Mardare, J. Math. Pures Appl. (2004)

(5) $C \in W_{loc}^{1,p}(\Omega) \rightarrow \Theta \in W_{loc}^{2,p}(\Omega)$ for any $p > n$ (optimal)

S. Mardare, Advances in Differential Eqs. (2007)

Thm.

$\Omega \subset \mathbb{R}^n$; simply-connected, bounded, smooth bdry manifold of class C^∞

$$C \in \left\{ \begin{array}{l} C \in W^{m,p}(\Omega); C(x) \in S^n \text{ for all } \\ x \in \bar{\Omega}, R^p_{.ijk} = 0 \text{ in } \mathcal{D}'(\Omega) \end{array} \right\} \rightarrow \Theta \in W^{m+1,p}(\bar{\Omega})$$

is of class C^∞ for any $m > 1, p > 1$, s.t. $p(m-1) > n$.

C. Mardare, Anal. Appl. (2006)

4. RECOVERY OF $\Theta: \Omega \rightarrow \mathbb{R}^n$ FROM $C: \Omega \rightarrow \mathbb{S}^n$:

4

UNIQUENESS THEOREMS, A.K.A. "RIGIDITY THEOREMS":

Thm Ω : connected open subset of \mathbb{R}^n (1) Θ immersion

$\Theta \in C^1(\Omega)$ & $\tilde{\Theta} \in C^1(\Omega)$ s.t. $\nabla \tilde{\Theta}^T \nabla \tilde{\Theta} = \nabla \Theta^T \nabla \Theta$ in Ω . Then:

$\exists c \in \mathbb{R}^n, \exists Q \in O^n$ s.t. $\tilde{\Theta}(x) = c + Q\Theta(x), x \in \Omega$ (classical)

(2) $\Theta \in C^1(\Omega)$ & $\det \nabla \Theta > 0$ in Ω
 $\tilde{\Theta} \in H^1(\Omega)$ & $\det \nabla \tilde{\Theta} > 0$ a.e. in Ω } s.t. $\nabla \tilde{\Theta}^T \nabla \tilde{\Theta} = \nabla \Theta^T \nabla \Theta$ a.e. in Ω . Then:

$\exists c \in \mathbb{R}^n, \exists Q \in O_+^n$ s.t. $\tilde{\Theta}(x) = c + Q\Theta(x)$ for a.a. $x \in \Omega$

P.G. Ciarlet - C. Mardare, Math. Models Methods Appl. Sci. (2003)

Rk. Information on sign of $\det \nabla \tilde{\Theta}$ is essential in (2)!

Pbm: Given $\Theta \in H^1(\Omega)$ s.t. $\det \nabla \Theta > 0$ a.e. in Ω , identify the set:

$\{\tilde{\Theta} \in H^1(\Omega); \det \nabla \tilde{\Theta} > 0$ a.e. in $\Omega, \nabla \tilde{\Theta}^T \nabla \tilde{\Theta} = \nabla \Theta^T \nabla \Theta$ a.e. in $\Omega\}$,

which is **strictly larger** than the set

$\{\tilde{\Theta} \in H^1(\Omega); \exists c \in \mathbb{R}^n, \exists Q \in O_+^n, \tilde{\Theta}(x) = c + Q\Theta(x)$ for a.a. $x \in \Omega\}$!

5. CONTINUITY OF $\mathbf{C} \rightarrow \Theta$

5

$$|\mathbf{b}| = \sqrt{\mathbf{b}^T \mathbf{b}}, \mathbf{b} \in \mathbb{R}^n$$

$$|\mathbf{A}| = \sup_{|\mathbf{b}|=1} |\mathbf{A}\mathbf{b}|, \mathbf{A} \in \mathbb{M}^m$$

Thm $\dot{\Theta}$ = equivalence class of Θ mod \mathcal{R} , where

$$(\tilde{\Theta}, \Theta) \in \mathcal{R} \Leftrightarrow \exists \mathbf{c} \in \mathbb{R}^n, \exists \mathbf{Q} \in \mathcal{O}^n \text{ s.t. } \tilde{\Theta}(x) = \mathbf{c} + \mathbf{Q}\Theta(x), x \in \Omega$$

(1) $\mathbf{C} \in \mathcal{C}^2(\Omega) \rightarrow \dot{\Theta} \in \mathcal{C}^3(\Omega)/\mathcal{R}$ Continuity wrt **Fréchet topologies*** of $\mathcal{C}^l(\Omega)$: Let $\Theta^k \in \mathcal{C}^3(\Omega)$, $k \geq 1$, and $\Theta \in \mathcal{C}^3(\Omega)$ be immersions s.t. $(\nabla \Theta^k)^T \nabla \Theta^k \rightarrow \nabla \Theta^T \nabla \Theta$ in $\mathcal{C}^2(\Omega)$. Then $\exists \tilde{\Theta}^k = \mathbf{c}^k + \mathbf{Q}^k \Theta^k$, $\mathbf{c}^k \in \mathbb{R}^n$, $\mathbf{Q}^k \in \mathcal{O}^n$, $\tilde{\Theta}^k \rightarrow \dot{\Theta}$ in $\mathcal{C}^3(\Omega)$.

* $\psi^k \rightarrow \psi$ in $\mathcal{C}^l(\Omega) \Leftrightarrow \forall K \subseteq \Omega$, $\sup_{\substack{x \in K \\ |\alpha| \leq l}} |\partial^\alpha (\psi^k - \psi)(x)| \rightarrow 0$.

P.G. Ciarlet - F. Laurent, ARMA (2003)

(2) $\mathbf{C} \in \mathcal{C}^2(\bar{\Omega}) \rightarrow \dot{\Theta} \in \mathcal{C}^3(\bar{\Omega})/\mathcal{R}$ Local Lipschitz-continuity wrt **Banach space norms** $\sup_{\substack{x \in \bar{\Omega} \\ |\alpha| \leq l}} |\partial^\alpha \psi(x)|$ if Ω is bdd & $\partial\Omega$ is Lipschitz-cont's

P.G. Ciarlet - C. Mandare, J. Math. Pures Appl. (2004)

(3) $\mathbf{C} \in L^{p/2}(\Omega) \rightarrow \dot{\Theta} \in W^{1,p}(\Omega)/\mathcal{R}$ for $p \geq 2$

See next theorem

Rk. Continuity $\Theta \in W^{1,p}(\Omega) \rightarrow \mathbf{C} = \nabla \Theta^T \nabla \Theta \in L^{p/2}(\Omega)$ is clear for any $p \geq 2$.

$$\tilde{\Theta} \in \dot{\Theta} \iff \exists c \in \mathbb{R}^n, \exists Q \in \mathcal{O}_+^n, \tilde{\Theta}(x) = c + Q\Theta(x), x \in \Omega \quad \boxed{6}$$

$$\|F\|_{L^p(\Omega; \mathbb{M}^n)} = \left\{ \int_{\Omega} |F(x)|^p dx \right\}^{1/p} \quad \left(\begin{array}{l} \text{Rotational invariance:} \\ \forall Q \in \mathcal{O}_+^n, |Q\psi| = |\psi| \end{array} \right)$$

$$\|\Theta\|_{H^1(\Omega; \mathbb{R}^n)} = \left\{ \int_{\Omega} (|\Theta(x)|^2 + |\nabla\Theta(x)|^2) dx \right\}^{1/2}$$

Thm P.G. Ciarlet - C. Mardare, J. Nonlinear Science (2004)

$\Omega \subset \mathbb{R}^n$: bounded, connected, open with $\partial\Omega$ Lipschitz-cont's
Let $\Theta \in \mathcal{C}^1(\bar{\Omega}; \mathbb{R}^n)$ be s.t. $\det \nabla\Theta > 0$ in $\bar{\Omega}$. Then \exists constant $c(\Theta)$ s.t.

$\forall \phi \in H^1(\Omega; \mathbb{R}^n)$ s.t. $\det \nabla\phi > 0$ a.e. in Ω ,
 $\exists \tilde{\phi} \in \dot{\Theta}$ such that

$$(*) \quad \|\tilde{\phi} - \Theta\|_{H^1(\Omega; \mathbb{R}^n)} \leq c(\Theta) \|\nabla\phi^T \nabla\phi - \nabla\Theta^T \nabla\Theta\|_{L^1(\Omega; \mathbb{R}^n)}^{1/2}$$

(*) is a **NONLINEAR KORN'S INEQUALITY**

Cor Let $\Theta \in \mathcal{C}^1(\bar{\Omega}; \mathbb{R}^n)$ be s.t. $\det \nabla\Theta > 0$ in $\bar{\Omega}$.

Let $\Theta^k \in H^1(\Omega; \mathbb{R}^n)$ be s.t. $\det \nabla\Theta^k > 0$ a.e. in $\Omega, k \geq 1$. Then:

$$\left. \begin{array}{l} (\nabla\Theta^k)^T \nabla\Theta^k \rightarrow \nabla\Theta^T \nabla\Theta \\ \text{in } L^1(\Omega; \mathbb{S}^n) \end{array} \right\} \Rightarrow \left\{ \begin{array}{l} \exists \tilde{\Theta}^k \in \dot{\Theta}^k \\ \text{s.t. } \tilde{\Theta}^k \rightarrow \Theta \text{ in } H^1(\Omega; \mathbb{R}^n) \end{array} \right.$$

Same result holds with $H^1(\Omega; \mathbb{R}^n)$ replaced by $W^{1,p}(\Omega; \mathbb{R}^n)$
 $-d^\circ-$ $L^1(\Omega; \mathbb{R}^n)$ $-d^\circ-$ $L^{p/2}(\Omega; \mathbb{R}^n)$
 for any $p \geq 2$.

COMMENTS (1) Earlier results of F. John (1961, 1972) and R.V. Kohn (1982) when $\Theta = \text{id}$ & ϕ is bi-Lipschitz

7

(2) Yu. G. Reshetnyak, Siberian Math. J. (2003):

Let $\Theta^k \in W^{1,\infty}(\Omega; \mathbb{R}^n)$, $k \geq 1$, be such that:

$\left\{ \begin{array}{l} \exists L \text{ s.t. } L^{-1} |\xi| \leq |\nabla \Theta^k(x) \xi| \leq L |\xi| \text{ for all } k \geq 1, \xi \in \mathbb{R}^n, \text{ a.a. } x \in \Omega^* \\ \text{for almost all } x \in \Omega, \mathbf{C}(x) \stackrel{\text{def}}{=} \lim_{k \rightarrow \infty} (\nabla \Theta^k(x))^T \nabla \Theta^k(x) \text{ exists.} \end{array} \right.$

Then $\exists \Theta \in W^{1,\infty}(\Omega; \mathbb{R}^n)$ & $\exists \tilde{\Theta}^k = \mathbf{e}^k + \mathbf{Q}^k \Theta^k$, $\mathbf{e}^k \in \mathbb{R}^n$, $\mathbf{Q}^k \in \mathbb{O}^n$ s.t.
 $\nabla \Theta^T \nabla \Theta = \mathbf{C}$ a.e. in Ω & $\tilde{\Theta}^k \xrightarrow{k \rightarrow \infty} \Theta$ in $W^{1,p}(\Omega; \mathbb{R}^n)$ for any $p > 1$.

(3) Some additional assumptions required in all cases:
bi-Lipschitz or *quasi-isometric* mappings; smooth limit

6. PROOF OF THE NONLINEAR KORN INEQUALITY (*) 8

Lemma 1: "Gradients suffice" Ass'n's on Ω & Θ as in Thm Ineq. holds $\iff \exists$ constant $C(\Theta)$ s.t.

$\forall \phi \in H^1(\Omega; \mathbb{R}^n)$ s.t. $\det \nabla \phi > 0$ a.e. in Ω , $\exists R = R(\phi, \Theta) \in \mathcal{O}_+^n$ s.t.

$$(**) \quad \|\nabla \phi - R \nabla \Theta\|_{L^2(\Omega; \mathbb{M}^n)} \leq C(\Theta) \|\nabla \phi^T \nabla \phi - \nabla \Theta^T \nabla \Theta\|_{L^1(\Omega; \mathbb{S}^n)}^{1/2}$$

Pf. Generalized Poincaré inequality: \exists constant d s.t.:

$$\forall \psi \in H^1(\Omega; \mathbb{R}^n), \quad \|\psi\|_{H^1(\Omega; \mathbb{R}^n)} \leq d \left(\|\nabla \psi\|_{L^2(\Omega; \mathbb{M}^n)} + \left| \int_{\Omega} \psi dx \right| \right)$$

Let $\mathbf{b} \stackrel{\text{def}}{=} \left(\int_{\Omega} dx \right)^{-1} \int_{\Omega} (\phi - R\Theta) dx = \mathbf{b}(\phi, \Theta)$ so that

$$\psi \stackrel{\text{def}}{=} \phi - (\mathbf{b} + R\Theta) \text{ satisfies } \int_{\Omega} \psi dx = 0$$

Combine Poincaré inequality applied to ψ and **(**)** □

Lemma 2: "Geometric rigidity"

G. Friesecke, R.D. James, S. Müller, *Comm. Pure Appl. Math.* (2002)

$\Omega \subset \mathbb{R}^n$ bounded, connected, open with $\partial\Omega$ Lipschitz-cont's

\exists constant $\Lambda(\Omega)$ s.t. $\forall \phi \in H^1(\Omega; \mathbb{R}^n)$, $\exists R = R(\phi) \in \mathcal{O}_+^n$ s.t.

$$\|\nabla \phi - R\|_{L^2(\Omega; \mathbb{M}^n)} \leq \Lambda(\Omega) \|\text{dist}(\nabla \phi, \mathcal{O}_+^n)\|_{L^2(\Omega)}$$

$$\stackrel{\text{def}}{=} \left\{ \int_{\Omega} \inf_{Q \in \mathcal{O}_+^n} |\nabla \phi(x) - Q|^2 dx \right\}^{1/2} \quad \square$$

Lemma 3: "A matrix inequality" Let $F \in M^n$ s.t. $\det F > 0$

9

Then $\text{dist}(F, O_+^n) \stackrel{\text{def}}{=} \inf_{Q \in O_+^n} |F - Q| \leq |F^T F - I|^{1/2}$

Pf. $Q_F \stackrel{\text{def}}{=} F(F^T F)^{-1/2} \in O_+^n$

$$\text{dist}(F, O_+^n) \leq |F - Q_F| = \left| \overbrace{Q_F}^{=F} (F^T F)^{1/2} - Q_F \right| \stackrel{\text{rotational invariance}}{=} |(F^T F)^{1/2} - I|$$

$$= \max\{|v_1 - 1|, |v_n - 1|\} \leq \max\{|v_1^2 - 1|^{1/2}, |v_n^2 - 1|^{1/2}\} = |F^T F - I|^{1/2}$$

$0 < v_1 \leq \dots \leq v_n$: singular values of F

□

Lemma 4: "Ineq. (**) holds if $\Theta = \text{id}$ " $\therefore \nabla \Theta = I$ & $\nabla \Theta^T \nabla \Theta = I$

$\Omega \subset \mathbb{R}^n$ bounded, connected, open with $\partial\Omega$ Lipschitz-cont's
 \exists constant $\Lambda(\Omega)$ s.t. $\forall \phi \in H^1(\Omega; \mathbb{R}^n)$ s.t. $\det \nabla \phi > 0$ a.e. in Ω ,

$$\exists R = R(\phi) \in O_+^n \text{ s.t. } \|\nabla \phi - R\|_{L^2(\Omega; M^n)} \leq \Lambda(\Omega) \|\nabla \phi^T \nabla \phi - I\|_{L^1(\Omega; S^n)}^{1/2}$$

Pf. L2 $\Rightarrow \forall \phi \in H^1(\Omega; \mathbb{R}^n)$,

$$\exists R = R(\phi) \in O_+^n \text{ s.t. } \|\nabla \phi - R\|_{L^2(\Omega; M^n)} \leq \Lambda(\Omega) \|\text{dist}(\nabla \phi, O_+^n)\|_{L^2(\Omega)}$$

L3 $\Rightarrow \forall \phi \in H^1(\Omega; \mathbb{R}^n)$ s.t. $\det \nabla \phi > 0$ a.e. in Ω ,

$$\text{dist}(\nabla \phi(x), O_+^n)^2 \leq |\nabla \phi(x)^T \nabla \phi(x) - I| \text{ for almost all } x \in \Omega$$

\therefore integrate over Ω .

□

Lemma 5: "Ineq. (**) holds if Θ is injective in $\bar{\Omega}$ "

10

Let $\Theta \in \mathcal{C}^1(\bar{\Omega}; \mathbb{R}^n)$ be s.t. $\det \nabla \Theta > 0$ in $\bar{\Omega}$ &

Θ injective in $\bar{\Omega}$. Then inequality (**) of L1 holds.

Pf. (i) Assumptions made on Θ imply:

$$\left\{ \begin{array}{l} \hat{\Omega} \stackrel{\text{def}}{=} \Theta(\Omega): \text{ bounded, connected, open with } \partial \hat{\Omega} \text{ Lipschitz-cont's} \\ \hat{\Theta} \stackrel{\text{def}}{=} \Theta^{-1} \in \mathcal{C}^1(\{\hat{\Omega}\}^-; \mathbb{R}^n); \forall \phi \in H^1(\Omega; \mathbb{R}^n) \text{ with } \det \nabla \phi > 0 \text{ a.e. in } \Omega, \\ \hat{\phi} \stackrel{\text{def}}{=} \phi \circ \hat{\Theta} \in H^1(\hat{\Omega}; \mathbb{R}^n) \text{ \& } \det \hat{\nabla} \hat{\phi} > 0 \text{ a.e. in } \hat{\Omega} \end{array} \right.$$

L4 $\Rightarrow \exists c_0(\Theta) \stackrel{\text{def}}{=} \wedge(\hat{\Omega})$ s.t. $\forall \phi \in H^1(\Omega; \mathbb{R}^n)$ with $\det \nabla \phi > 0$ a.e. in Ω ,

$$\forall \phi \in H^1(\Omega; \mathbb{R}^n) \text{ with } \det \nabla \phi > 0 \text{ a.e. in } \Omega, \exists R = R(\hat{\phi}) = R(\phi, \Theta) \in \mathcal{O}_+^n$$

$$\text{s.t. } \|\hat{\nabla} \hat{\phi} - R\|_{L^2(\hat{\Omega}; \mathbb{M}^n)} \leq c_0(\Theta) \|\hat{\nabla} \hat{\phi}^T \hat{\nabla} \hat{\phi} - \mathbf{I}\|_{L^1(\hat{\Omega}; \mathbb{S}^n)}^{1/2}$$

$$\begin{aligned} \text{(ii)} \quad \|\hat{\nabla} \hat{\phi} - R\|_{L^2(\hat{\Omega}; \mathbb{M}^n)}^2 &= \int_{\hat{\Omega}} |\hat{\nabla} \hat{\phi} - R|^2 d\hat{x} = \int_{\Omega} |\nabla \phi \nabla \Theta^{-1} - R|^2 \det \nabla \Theta dx \\ &\geq \int_{\Omega} |\nabla \phi - R \nabla \Theta|^2 \underbrace{|\nabla \Theta|^{-2} \det \nabla \Theta}_{\geq c_1(\Theta) > 0 \text{ on } \bar{\Omega}} dx \end{aligned}$$

$$\begin{aligned} \text{(iii)} \quad \|\hat{\nabla} \hat{\phi}^T \hat{\nabla} \hat{\phi} - \mathbf{I}\|_{L^1(\hat{\Omega}; \mathbb{S}^n)} &= \int_{\hat{\Omega}} |\hat{\nabla} \hat{\phi}^T \hat{\nabla} \hat{\phi} - \mathbf{I}| d\hat{x} \\ &= \int_{\Omega} |\nabla \Theta^T (\nabla \phi^T \nabla \phi - \nabla \Theta^T \nabla \Theta) \nabla \Theta^{-1}| \det \nabla \Theta dx \\ &\leq \int_{\Omega} |\nabla \phi^T \nabla \phi - \nabla \Theta^T \nabla \Theta| \underbrace{\|\nabla \Theta^T\| \|\nabla \Theta^{-1}\| \det \nabla \Theta}_{\leq c_2(\Theta) < +\infty \text{ on } \bar{\Omega}} dx \end{aligned}$$

(iv) Hence

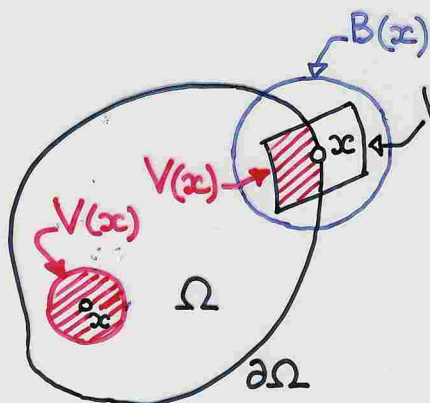

$$\text{(**) } \|\nabla \phi - R \nabla \Theta\|_{L^2(\Omega; \mathbb{S}^n)} \leq \underbrace{c_0(\Theta)}_{= c_0(\Theta) c_1(\Theta)^{-1/2} c_2(\Theta)^{1/2}} \|\nabla \phi^T \nabla \phi - \nabla \Theta^T \nabla \Theta\|_{L^1(\Omega; \mathbb{S}^n)}^{1/2}$$

Rk. Ass'ns $\Theta \in \mathcal{C}^1(\bar{\Omega}; \mathbb{R}^n)$ & $\det \nabla \Theta > 0$ in $\bar{\Omega}$ are essential!

Lemma 6: "Ineq. (**)" holds for any $\Theta \in C^1(\bar{\Omega}; \mathbb{R}^n)$ s.t. $\det \nabla \Theta > 0$ in $\bar{\Omega}$ " 11

Pf. (i) $\forall x \in \Omega, \exists$ open ball $V(x)$ centered at x s.t. $\Theta|_{\overline{V(x)}}$ is injective

$\forall x \in \partial\Omega, \exists$ open ball $B(x)$ s.t.

$(\text{Ext}_{\mathbb{R}^n} \Theta)|_{\overline{B(x)}}$ is injective ($\det \nabla \Theta > 0$ in $\bar{\Omega}$)

$\partial\Omega$ Lipschitz-cont's $\Rightarrow \exists W(x)$ open nbhd of x def'd

by a local frame s.t. $W(x) \subset B(x)$ and

$V(x) \stackrel{\text{def}}{=} W(x) \cap \Omega$ is connected and

$\partial V(x)$ is Lipschitz-cont's.

By compactness, $\Omega = \bigcup_{j=1}^N V(x_j)$. By re-ordering $V_j = V(x_{\sigma(j)})$:

$\Omega = \bigcup_{j=1}^N V_j$, V_j bounded, connected, open, ∂V_j Lipschitz-cont's

$\bigcup_{k=1}^N V_k \stackrel{\text{def}}{=} \bigcup_{j=1}^k V_j$ connected, $1 \leq k \leq N$, and $\Theta|_{\overline{V_j}}$ injective, $1 \leq j \leq N$.

(ii) Induction: For some $1 \leq k < N, \exists C_k(\Theta), \exists R_k = R_k(\phi, \Theta) \in \mathcal{O}_+^n$ s.t.

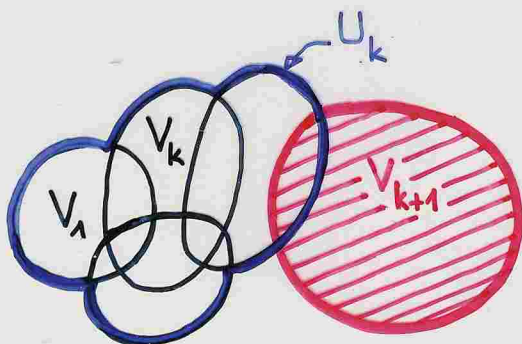

$$(**)_k \quad \|\nabla \phi_k - R_k \nabla \Theta_k\|_{L^2(U_k; \mathbb{M}^n)} \leq C_k(\Theta) \|\nabla \phi_k^T \nabla \phi_k - \nabla \Theta_k^T \nabla \Theta_k\|_{L^1(U_k; \mathbb{S}^n)}^{1/2}$$

$\phi_k \stackrel{\text{def}}{=} \phi|_{U_k}, \Theta_k \stackrel{\text{def}}{=} \Theta|_{\overline{U_k}}$ (Note: $U_1 = V_1$)

L5 $\Rightarrow \exists \tilde{C}_k(\Theta), \exists \tilde{R}_{k+1} = \tilde{R}_{k+1}(\phi, \Theta) \in \mathcal{O}_+^n$ s.t.

$$(**)'_k \quad \|\nabla \tilde{\phi}_{k+1} - \tilde{R}_{k+1} \nabla \tilde{\Theta}_{k+1}\|_{L^2(V_{k+1}; \mathbb{M}^n)} \leq \tilde{C}_k(\Theta) \|\nabla \tilde{\phi}_{k+1}^T \nabla \tilde{\phi}_{k+1} - \nabla \tilde{\Theta}_{k+1}^T \nabla \tilde{\Theta}_{k+1}\|_{L^1(V_{k+1}; \mathbb{S}^n)}^{1/2}$$

$\tilde{\phi}_{k+1} \stackrel{\text{def}}{=} \phi|_{V_{k+1}}, \tilde{\Theta}_{k+1} \stackrel{\text{def}}{=} \Theta|_{\overline{V_{k+1}}}$

By means of a technical trick, inequalities

$(**)_k$ & $(**)'_k$ yield a single inequality

$(**)_{k+1}$ over the set U_{k+1} . □

Another approach to the fundamental theorem of Riemannian geometry in \mathbb{R}^3 , by way of rotation fields:

P.G. Ciarlet, L. Gratie, O. Iosifescu, C. Mardare, C. Vallée, JMPA [2007]

THM $\Omega \subset \mathbb{R}^3$: simply-connected, open
 $C \in W_{loc}^{1,\infty}(\Omega; \mathbb{S}_>^3)$ given that satisfies

(*) $CURL \Lambda + COF \Lambda = 0$ in $\mathcal{D}'(\Omega; \mathbb{M}^3)$,

where

$$\Lambda \stackrel{\text{def}}{=} \frac{1}{\det U} \left\{ U (CURL U)^T U = \frac{1}{2} (\text{tr} [U (CURL U)^T]) U \right\}$$
$$U \stackrel{\text{def}}{=} C^{1/2}$$

Then there exists $\Theta \in W_{loc}^{2,\infty}(\Omega; \mathbb{R}^3)$ such that

$$\nabla \Theta^T \nabla \Theta = C \text{ in } W_{loc}^{1,\infty}(\Omega; \mathbb{S}_>^3)$$

Necessity of (*): C. Vallée (1992)

No Christoffel symbols; "intrinsic" matrix operators
Proof consists in:

(a) Determining an orthogonal matrix field $R \in W_{loc}^{1,\infty}(\Omega; \mathbb{O}^3)$
(an idea that goes back to R.T. Shield (1973));

(b) Determining an immersion $\Theta \in W_{loc}^{2,\infty}(\Omega; \mathbb{R}^3)$ that satisfies $\nabla \Theta = RC^{1/2}$ in Ω ;

by successively solving two Pfaff systems.

For (a): $\partial_j R = RA_j$, where

$$A_j := \frac{1}{2} \left\{ U^{-1} (\nabla c_j - (\nabla c_j)^T) U^{-1} + U^{-1} \partial_j U - (\partial_j U) U^{-1} \right\},$$
$$c_j := j\text{-th column of } U^2 = C$$

7. INTRINSIC APPROACH TO

3D-LINEARIZED ELASTICITY - Pure traction pbm:

12

$$J(u) = \inf_{v \in H^1(\Omega; \mathbb{R}^3)} J(v)$$

$$J(v) = \frac{1}{2} \int_{\Omega} A^{ijkl} e_{kl}(v) e_{ij}(v) dx - \int_{\Omega} f \cdot v dx$$

$= \frac{1}{2} (\partial_j v_i + \partial_i v_j)$

$L(v)$

$L(v) = 0 \forall v \in H^1(\Omega; \mathbb{R}^3)$ s.t. $e_{ij}(v) = 0 \Leftrightarrow \forall v = a + b \text{Id}$ with $a, b \in \mathbb{R}^3$

Existence: Korn's inequality; Uniqueness up to $a + b \text{Id}$ if Ω connected

THEOREM: Ω bdd, simply-connected, connected; Lipschitz bdry

Given: $e = (e_{ij}) \in L^2_{\text{sym}}(\Omega)$ s.t. (weak St Venant conditions)

$$\mathcal{R}_{ijkl}(e) \stackrel{\text{def}}{=} \partial_{lj} e_{ik} + \partial_{ki} e_{jl} - \partial_{li} e_{jk} - \partial_{kj} e_{il} = 0 \text{ in } H^{-2}(\Omega)$$

Then there exists $v \in H^1(\Omega; \mathbb{R}^3)$ s.t. $e_{ij} = \frac{1}{2} (\partial_j v_i + \partial_i v_j)$

Uniqueness: up to $a + b \text{Id}$

Proof is based on a "weak Poincaré Lemma"; see p. 12 bis

COROLLARY: There exists an isomorphism

$$\mathfrak{F}: \mathbf{E}(\Omega) \stackrel{\text{def}}{=} \{e \in L^2_{\text{sym}}(\Omega); \mathcal{R}_{ijkl}(e) = 0\} \rightarrow H^1(\Omega; \mathbb{R}^3) / \{v = a + b \text{Id}\}$$

Rk: This corollary provides a new pf of Korn's inequality

 C. Amrouche, P.G. Ciarlet, P.G. Ciarlet, Jr., C.R.A.S. (2007)

THEOREM: Ω bdd, simply-connected, connected; Lipschitz bdry

The minimization pbm: Find $\mathcal{E} \in \mathbf{E}(\Omega)$ such that

$$j(\mathcal{E}) = \inf_{e \in \mathbf{E}(\Omega)} j(e), \quad j(e) \stackrel{\text{def}}{=} \frac{1}{2} \int_{\Omega} A^{ijkl} e_{kl} e_{ij} dx - (L \cdot \mathfrak{F})(e)$$

has one and only one solution \mathcal{E} . Besides, $\mathcal{E} = e(u)$

The stress $\sigma = (\sigma^{ij})$ is then given by $\sigma^{ij} = A^{ijkl} \mathcal{E}_{kl}$

Weak version of a classical theorem of Poincaré

A classical theorem of Poincaré (see, e.g., page 235 in Schwartz¹⁴) asserts that, if functions $h_k \in C^1(\Omega)$ satisfy $\partial_l h_k = \partial_k h_l$ in a simply-connected open subset Ω of \mathbb{R}^3 (or \mathbb{R}^n for that matter), then there exists a function $p \in C^2(\Omega)$ such that $h_k = \partial_k p$ in Ω . This theorem was extended by Girault & Raviart¹² (see Theorem 2.9 in Chapter 1), who showed that, if functions $h_k \in L^2(\Omega)$ satisfy $\partial_l h_k = \partial_k h_l$ in $H^{-1}(\Omega)$ on a bounded, connected and simply-connected open subset Ω of \mathbb{R}^3 with a Lipschitz-continuous boundary, then there exists $p \in H^1(\Omega)$ such that $h_k = \partial_k p$ in $L^2(\Omega)$. We now carry out this extension one step further.

Theorem .. Let Ω be a bounded, connected, and simply-connected open subset of \mathbb{R}^3 with a Lipschitz-continuous boundary. Let $h_k \in H^{-1}(\Omega)$ be distributions that satisfy

$$\partial_l h_k = \partial_k h_l \text{ in } H^{-2}(\Omega).$$

Then there exists a function $p \in L^2(\Omega)$, unique up to an additive constant, such that

$$h_k = \partial_k p \text{ in } H^{-1}(\Omega).$$

| THEOREM: Ω bdd, connected; Lipschitz bdry

(1) Given $\mathbf{e} = (e_{ij}) \in L^2_{\text{sym}}(\Omega)$ s.t. (Donati conditions #1):

$$\int_{\Omega} e_{ij} s_{ij} dx = 0 \quad \text{for all } \mathbf{s} = (s_{ij}) \in \mathbf{H}^1_{0,\text{sym}}(\Omega) \text{ s.t. } \text{div } \mathbf{s} = \mathbf{0} \text{ in } \Omega$$

Then there exists $\mathbf{v} = (v_i) \in \mathbf{H}^1(\Omega)$ s.t.

$$e_{ij} = \frac{1}{2} (\partial_j v_i + \partial_i v_j)$$

(2) Given $\mathbf{e} = (e_{ij}) \in L^2_{\text{sym}}(\Omega)$ s.t. (Donati conditions #2):

$$\int_{\Omega} e_{ij} s_{ij} dx = 0 \quad \text{for all } \mathbf{s} = (s_{ij}) \in L^2_{\text{sym}}(\Omega) \text{ s.t. } \text{div } \mathbf{s} = \mathbf{0} \text{ in } \mathbf{H}^{-1}(\Omega)$$

Then there exists $\mathbf{v} = (v_i) \in \mathbf{H}^1_0(\Omega)$ s.t.

$$e_{ij} = \frac{1}{2} (\partial_j v_i + \partial_i v_j)$$

T. W. Ting, Tensor, N.S. (1974)

G. Geymonat, F. Krasucki, Rend. Accad. Naz. Sci. (2005)

C. Amrouche, P.G. Ciarlet, L. Gratie, S. Kesavan, JMPA (2006)

Both (1) and (2) again lead to minimization problems that **directly provide** the **strain** $\mathbf{E} = (\mathcal{E}_{KL})$

\therefore that **directly provide** the **stresses**

$$\sigma^{ij} = A^{ijkl} \mathcal{E}_{kl}$$
